

M5RR - ESPADA is a forged aluminium wheel designed for 125cc. This model satisfies the demands for a high performance product at a low cost.

ESPADA is made with the pluriennial Marchesini experience in designing and producing high performance wheels: it is a design, produced and tested according to the standards normal for forged magnesium wheels using an high strength wrought aluminium alloy processed with the exclusive Marchesini's closed-die precision forging.

ESPADA is an excellent replacement of forged magnesium wheels when cost reduction is a priority, but performance cannot be disregarded.

This wheel takes advantage of the experience gained through collaboration with the leading factory racing teams, which allowed Marchesini to achieve excellent levels of stiffness and strength, while maintaining a weight lower than cast magnesium wheels.

ESPADA takes advantage of all of Marchesini exclusive production processes which includes strict quality control on materials and final products including a severe fatigue test; thus Marchesini's products warrant all the safety and quality standards required by leading manufacturers and race teams.

TECHNICAL FEATURES

MATERIAL

High strength wrought aluminium alloy

MANUFACTURE

Closed-die precision forging, heat treatment and machining of 100% of surfaces

PESO

5300g per set (assembled wheels, variations of $\pm 200g$ depending on specific application)

DIMENSIONS

Front 2,50 x 17 "
Rear 3,50 x 17 "

COMPATIBILITY

Aprilia RS125 GP (available with sprocket carrier)
Honda RS125 GP
KTM 125 FRR

NOTES

Supplied ready for assembly, complete with black anodized 7075 Aluminium fittings

M5RR ESPADA
